

Yiyang(Diana) Wang

Summary I am a driven Computer Science Ph.D. student at Georgia Tech specializing in human-AI interaction, multimodal sensing, and applied artificial intelligence. In addition to building sensor-driven systems for health and well-being, I investigate how multimodal data, including text, audio, and environmental signals, can be integrated into intelligent systems that support both understanding and generation. My goal is to bridge technical advances in multimodal learning with user-centered design, creating systems that are not only powerful but also adaptable to real-world human needs.

Interest Areas Human-AI Interaction, Applied AI, Ubiquitous Computing.
